

Assignment 1

The first assignment is to create an account/workspace for oracle's apex online software (free) or use SQL developer if you have your account working.

Using their demo tables or a database of your choice run the following commands and screenshot them into a word document to turn in:

SELECT FROM

SELECT FROM WHERE

DESCRIBE

JOIN

HAVING

GROUP BY — can be done at the same time as having

INSERT INTO

ALTER TABLE

UPDATE — Note a trigger might prevent this from going through, that is fine just send me the screenshot still.
